

Ledranol EM

Leather chemicals · Fatliquor

Combination fatliquor based on lecithin and synthetic components; produces very soft leathers for furniture, soft napa, suede, and garments.

Typical analysis

Charge	Anionic
Active matter	80 – 82%
pH (10% solution)	6.5 – 7.5

Shelf life

12 months when properly stored. Keep from freezing or overheating.

Application

An excellent fatliquor for medium-soft to very soft leather by varying the offer. It is highly compatible with various natural and mineral oils and with other Ledranol fatliquors and retanning agents. It gives a warm, smooth, rich wet touch with no greasiness, outstanding softness and excellent milling properties, distributing evenly for a uniform temper and colour with very little bleaching.
